SNAPSHOT

A concrete pump is an important part of any construction project. It is used in transferring liquid concrete by pumping it to the construction site. There are mainly three types of concrete pumps: Boom or truck mounted pump; Trailer, line, or stationary pump; Specialized usage pump. Boom or Truck Mounted Pump definition: This type of pump is attached to a truck and uses a remote controlled articulating robotic arm, also known as boom, to place the concrete accurately at the construction site. It is also known as a truck mounted boom pump. Boom pumps are generally used in large construction projects because of its capability of pumping high volume of concrete in less time. It also saves substantial labor because of its multi-purpose robotic arm. Trailer, line or stationary pump: This type of pump is mounted on a trailer and requires steel or rubber hoses to be attached to the outlet of the machine. The hoses are generally manually attached and can also be joined to another extension hoses to reach the appropriate site where the concrete needs to be put. Trailer pumps concrete at a rate lower than that of boom pumps and therefore are used in applications that require smaller volume pumping such as swimming pools, sidewalks, and small homes concrete slabs. There are also skid mounted and rail mounted concrete pumps, but these are uncommon and only used on specialized jobsites such as mines and tunnels.
