### SNAPSHOT

Waterjet machines provide an efficient method of producing intricate components of machines with relative ease and precision. It facilitates versatile and effective machining, cutting, and shaping of metals and other materials. A waterjet machine uses a pump to eject water at an extremely high pressure through a nozzle to cut metals and other materials. These machines generate a lesser amount of heat compared to other cutting technologies and can, therefore, be used even on materials that are highly sensitive to high temperatures. Waterjet machines also help to ensure minimal wastage of the material being machined.
