Alpha amylase is a protein involved in the digestion of food. This type of digestive enzyme cleaves large molecules of food into smaller pieces that can be taken up in the intestines and metabolized. In this case, the molecules are long chains of glucose known as starch. There are two types of this protein in humans, one in the pancreas and one in the saliva, also known as ptyalin.

It is widely used in starch sugar, brewing, bread, fruit and vegetable drinks, pharmaceuticals and feed and other fields.
