Abstracts

The exhaust gas temperature sensor (EGTS), which is located in front of the Diesel Oxidation Catalyst (DOC) and/or in front of the Diesel Particulate Filter (DPF), detects exhaust gas temperature and converts it into a voltage and feeds back to the engine ECU with the voltage signal in order to control engine conditions to effectively reduce emission. Exhaust gas temperature sensors are an indispensable feature of modern vehicles, as they guard components exposed to the flow of hot exhaust gas against critical overheating.
