## Abstracts

Fineblanking is a specialty type of metal stamping that can achieve part characteristics such as flatness and a full sheared edge to a degree that is nearly impossible using a conventional metal cutting or punching process. Fineblanking creates smooth, quadrilateral, crack - and burr-free fineblanked surfaces, while the component itself is flat and level thanks to the clamping process. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market.
