A biorefinery is a refinery that converts biomass to energy and other beneficial byproducts such as chemicals. According to the International Energy Agency Bioenergy, biorefining is defined as a “the sustainable processing of biomass into a spectrum of bio-based products such as food, feed, chemicals, materials and bioenergy such as biofuels, power and/or heat. The biorefineries work by providing multiple chemicals by fractioning an initial raw material into multiple intermediates which can be further converted into value-added products. In the context of China-US trade war and COVID-19 epidemic, it will have a big influence on this market.
