## Abstracts

Biostimulant is a substance that is neither a plant nutrient nor a pesticide, but has a positive impact on plant health. A biostimulant is an organic material that, when applied in small quantities, enhances plant growth and development such that the response cannot be attributed to application of traditional plant nutrients.

The growing demand of organic food products and to meet the demand for food in the growing world population which directly drive growth of the Biostimulants, as it is used in agriculture as a nutrients additive to increase the efficiency of nutrients especially nitrogen and phosphorus based nutrients inputs, according to research, the global Biostimulants market is anticipated growing at 9.7% CAGR during 2018-2022, and reach 3.02 billion USD by 2022.

Geographically, Europe is dominating the Biostimulants market in both production and consumption; however, Asia Pacific is projected to grow at highest growth rate around the world, the growth region followed by North America, Asia Pacific is expecting to grow at a CAGR of 13.3% over the forecast period.

Base on applications, Biostimulants market can be segmented into row crops, fruits, vegetables and so on, row crops segment holds largest market share throughout the forecast period. There is an increased consumption of row crops in the total cultivated land.
