## Abstracts

The pursuit of Cost-effective and Renewable by modern people consistently since the advent of Heat and Power, the rise in the consumption of fuel derived from biomass, wood, and waste heat, is likely to boost the installation of combined heat and power (CHP) across the globe, according to research, global Combined Heat and Power (CHP) Market is expected to reach USD 714 billion by 2020.

Geographically, the global CHP installation market is projected to register a CAGR of 4.11% between 2016 and 2020. The Asia Pacific is expected to grow at a highest CAGR over 2016-2020, region followed by Europe, which is projected to exhibit a CAGR of 3.95% for the forecast period. The prospects for CHP installations have improved globally in response to the rising energy prices. This, combined with stringent regulations implemented to curb carbon emissions from conventional systems, is expected to aid the proliferation of CHP systems worldwide.

On the basis of types, CHP systems run on both renewable and non-renewable fuels such as natural gas, coal, wood, biomass, oil, and waste heat. They can operate at an efficiency level as high as 77% to 90% as compared to the 46% efficiency level of conventional systems.

However, the best economics of a CHP system is achieved in cold climates, when the energy rates are high, prices of natural gas fall, and there is a continuous demand for heat. Besides this, diverse functionalities offered by CHP systems also encourage their installation in both colder and hotter regions.

Global top Heat and Power (CHP) suppliers such as BDR Thermea Group B.V., 2G Energy AG, Siemens AG, Edina Ltd., W?rtsil? Corporation, ENER-G Holdings Plc

(ENER-G), Clarke Energy Ltd., and others. The top eight companies hold 48% of the global combined heat and power market.
