Continuous fiber reinforced thermoplastic Composites (CFR-TP) have been more than 25 years of Research and Development, reinforcing fiber types used by CFR-TP are mainly carbon fiber, glass fiber and Kevlar fiber, substrate types include PP?PA?PC?PEI?PPS and PEEK and other thermoplastic substrates, the early focus on aerospace and military applications, and grow by a large margin beginning in 2002, and is gradually used in automobiles, sports equipment, transportation, industry and other fields.

The main molding form of CFR-TP comprises Unidirectional Prepreg, Fabric Prepreg, Commingled yarn and other ways, wherein the application of prepreg related products is one of the current mainstream technologies on the market.

The main impregnated construction methods of thermoplastic fiber reinforced prepreg are as follows: Solution Impregnation Technique, Melt Impregnation Technique, Film Stacking Technique, Powder Impregnation Technique, Fiber Commingled Technique and In-situ polymerization.

The global continuous fiber reinforced thermoplastic (CFR-TP) market was valued at about USD 175.0 million in 2014, and is expected to reach USD 250.7 million by 2018, growing at a CAGR of 9.4% from 2015 to 2019. In terms of region, North America is the largest market of continuous fiber reinforced thermoplastic (CFR-TP) followed by Europe, Asia-Pacific region will have a high growth in the next few years. By the resin type, PP occupies the largest market share of continuous fiber reinforced thermoplastic (CFR-TP). Based on the applications, transportation and aerospace account for the largest share, more than 40%.
