A transformer is a passive electrical device that transfers electrical energy from one electrical circuit to another, or multiple circuits. A thyristor is a solid-state semiconductor device with four layers of alternating P- and N-type materials. An insulated-gate bipolar transistor (IGBT) is a three-terminal power semiconductor device primarily used as an electronic switch, which, as it was developed, came to combine high efficiency and fast switching. In the context of China-US trade war and COVID-19 epidemic, it will have a big influence on this market.
