## Abstracts

The process of conversion of one form of energy to another form of energy is known as transduction. A current transducer converts a signal in one form of energy to a different form of energy. Transducers are often employed at the boundaries of automation, measurement, and control systems, where electrical signals are converted to and from other physical quantities (energy, force, torque, light, motion, position, etc.). Current transducers are used to monitor the TeleCom power supply in cells or substations. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market. Current Transducer Report by Material, Application, and Geography – Global Forecast to 2025 is a professional and comprehensive research report on the world's major regional market conditions, focusing on the main regions (North America, Europe and Asia-Pacific) and the main countries (United States, Germany, United Kingdom, Japan, South Korea and China).
