For patients to properly heal after a surgical procedure, dentists must use the appropriate sutures. The right sutures properly close the wound and secure the surgical flaps, which promotes healing. There are a variety of suture types available, with some better for certain procedures than others. Sutures must be easy to use and selected based on the procedure being performed. Sutures should feature tensile strength, tissue biocompatibility and offer minimal knot slippage. Dental Suture are mainly classified into the following types: Absorbable and Non-absorbable.
