Electrodeionization is a water treatment technology that utilizes electricity, ion exchange membranes and resin to deionize water and separate dissolved ions (impurities) from water. It differs from other water purification technologies in that it is done without the use of chemical treatments and is usually a polishing treatment to reverse osmosis (RO).

The main usage of Electrodeionization technology are the water treatment application and also supplied by Ionpure, E-cell and SnowPure are in electronics, pharmaceutical, and power generation applications, along the increasing the clean water challenge across global, the water treatment application will further occupy more of Electrodeionization system market, according to research, the global Electrodeionization system market is expected to grow at a CAGR of 6.4% during 2017-2021.

Geographically, Asia Pacific is expected to account for the largest market share of the Electrodeionization System over the forecast period due to higher demand water treatment and resin process from its world largest and increasing base of automobile, packaging, chemical and pharmaceutical industries. In addition, Asia Pacific is projected to have the fastest growth, owing to rapidly developing manufacturing bases and increasing number of end-use industry players, in developing nations such as China and India in this region.

In terms of theory, water is passed between an anode and a cathode. Ion-selective membranes allow the positive ions to separate from the water toward the negative electrode and the negative ions toward the positive electrode. High purity deionized water results.

Global top manufacturers operating in Electrodeionization System market are ure Aqua, Inc., Agape Water Solutions, Inc, Lenntech, All Water Systems, Snow Pure, RWL Water, and The McIlvaine Company among others.
