Abstracts

Endotracheal intubation is the placement of a tube into the trachea via the nose or mouth and needs to be secured with a device to prevent movement as accidental slippage of the tube can internally injure the patient.

These securement devices should be skin-friendly and be made of lightweight material that could be gentle for patients with sensitive skin.

In order to minimize any side-effects due to the prolonged use of securement devices, recently these devices are being developed with latex-free material and avoid the use of any adhesives that could touch the face.
