Ethyl acetate. Acts as solvent. It is low-boiling and fast-evaporating. Has excellent solvent activity, high electrical resistance, low MIR value, mild odor and low surface tension. It is non-HAP, non-SARA, readily biodegradable and REACH compliant urethane grade.

Ethyl Acetate Grade Urethane is one of more traditional faster evaporating solvents. It is used in the development of varnishes, adhesives, explosives, artificial leather, textiles, photography, perfumes, chemicals, etc. It replaces MEK (Methyl Ethyl Ketone) as solvent in many applications. Due to its low humidity and high purity allows the development of polymerization reactions. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market. Ethyl Acetate Grade Urethane Report by Material, Application, and Geography – Global Forecast to 2025 is a professional and comprehensive research report on the world's major regional market conditions, focusing on the main regions (North America, Europe and Asia-Pacific) and the main countries (United States, Germany, United Kingdom, Japan, South Korea and China).
