Abstracts

Fluorine plastic is part or all of the hydrogen replaced by fluorine alkane polymers, fluorine itself is chemically a bit curious; it is the most reactive halogen, yet its most well-known compounds such as CFCs and fluoropolymers are best known and used because they are stable and inert.

Fluorine plastics are used widely; it almost around us every day, with increasing population and speedy urbanization, the Fluorine plastics are expected to maintain the stable growth for the forecast period, according to research, the global Fluorine Plastic market is expected to register a CAGR of 4.8% over 2018-2022.

Base on the types the Fluorine Plastic market can be categorized into Polytetrafluoroethylene (PTFE), Fluorinated ethylene propylene (FEP), Perfluoroalkoxy (PFA), Polychlorotrifluoroethylene (PCTFF), Polyvinylidene fluoride (PVDF), and Others, according to research, the Polytetrafluoroethylene (PTFE) accounted for the largest share of Fluorine Plastic market in 2017, followed by Fluorinated ethylene propylene (FEP).

However, there are some restrains for the future growth of Fluorine Plastic, which is generally considered the effect of chlorofluorocarbons (CFCs) on the atmosphere's ozone layer.

Geographically, the Asia Pacific is the largest market in terms of consumption, moreover, the economic development in Asia Pacific which driving substantial investments in industries such as transportation, and building & construction is fueling the fluorine plastic market.
