## Abstracts

A fluorescence spectrophotometer (or fluorometer, fluorospectrometer, or fluorescence spectrometer) measures the fluorescent light emitted from a sample at different wavelengths, after illumination with a xenon flash lamp. Fluorometers can have different channels for measuring differently-colored fluorescent signals (that differ in their wavelengths), such as green and blue, or ultraviolet and blue, channels. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market.
