## Abstracts

Compounding Aseptic Isolator (CAI) and Compounding Aseptic Containment Isolator (CACI) are alternative containment cabinets to Biological Safety Cabinets (BSCs) to be used in scientific laboratories. These close isolators provide a better physical barrier to protect the health of laboratory workers, maintain the sterility of experimental materials, and prevent the contamination of the environment. Closed containment cabinets are safer to use in research laboratories to provide a clean work environment, prevent exposure of laboratory personnel, prevent aerosol contamination, avoid pathogenic microorganisms to escape or enter the cabinet, prevent cross-contamination of experiments, and protect the environment. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market. Laboratory Isolators Report by Material, Application, and Geography – Global Forecast to 2025 is a professional and comprehensive research report on the world's major regional market conditions, focusing on the main regions (North America, Europe and Asia-Pacific) and the main countries (United States, Germany, United Kingdom, Japan, South Korea and China).
