Abstracts

A logic analyzer is an electronic instrument that captures and displays multiple signals from a digital system or digital circuit. A logic analyzer may convert the captured data into timing diagrams, protocol decodes, state machine traces, assembly language, or may correlate assembly with source-level software. Logic Analyzers have advanced triggering capabilities, and are useful when a user needs to see the timing relationships between many signals in a digital system.

According to forecast, the global logic analyzer market is expected to grow at a CAGR of 6.7% from 2015 to 2021, and in terms of revenue, will be valued at USD 7.15 billion by 2021.

Currently on the market logic analyzer can be divided into two categories, Logic State Analyzer (LSA) and Logic Timing Analyzer. The basic structures of these two kinds of analyzers are similar, the main difference is shown in the display mode and timing mode. LSA is estimated to be the largest market.

In terms of applications, logic analyzer is widely used in Computer and Integrated Circuit fields. Among them, Integrated Circuit fields will be the largest market for logic analyzers, however, with the development of Microcomputer, computer market will surpass the integrated circuit in the next ten years.

On the basis of geographies, North America was the largest market for logic analyzers in 2015, and this share will continue to maintain during the forecast period, followed by Europe. Asia Pacific region is expected to grow at the highest growth rate from 2015 to 2021.

Logic analyzer has 5 main suppliers, such as United States, Japan, Holland, Korea and China. Among them, the market share of U.S. manufacturers is about 70%, Tektronix is about 48%, HP is about 10%, other U.S. manufacturers are over 10%. Japanese manufacturers account for about 10% – 15%.
