Abstracts

Medium Density Polyethylene (MDPE) films is a plastic material which provides an excellent balance of stiffness and toughness with good shock and drop resistance.

Medium density PE has good drop resistance and good shock resistance. This material is less notch sensitive than HDPE and its resistance to stress cracking is better as well. It sits in between LDPE and HDPE in regards to melting point. When compared to the other grades, its role has decreased significantly with the introduction of linear grades. Often blended with HDPE and LDPE for a facing component. Suitable for a number of specialty packaging application such as lamitube, stand-up pouches, over-wrap films, milk pouches and lamination films where both stiffness and toughness are essential.

In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market.
