Abstracts

Polyethylene terephthalate (PET) is a thermoplastic polymer, which is colorless, flexible lightweight, and transparent in its natural state. PET resins are commercially produced from ethylene glycol (EG) and either dimethyl terephthalate (DMT) or terephthalic acid (TPA). It offers a unique combination of properties including resistance to alcohols, oils, greases, solvents, and diluted acids, has low gas permeability, excellent gas (oxygen, carbon dioxide) and moisture barrier properties, and high strength. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market.
