The Polyolefin catalyst represents the heart of any reactor system and can significantly change the competitiveness of a process technology. Many licensors have worked in collaboration with others to produce catalyst for process technologies of others as well as their own.

The driving factor is keeping growing Polyolefins products, which have grown to become an annual installed capacity of about 180 million tons globally, under this growth trend of Polyolefins products, the demand for the Polyolefin catalyst is anticipated to reach USD\$ 2082 million by 2021.

In terms of geography, the Asia Pacific is holding the position of world largest market, which accounted for over 50% of the global market in 2016, the emerging market such as China, India South Korea, Saudi Arabia are the main contributors, among the consumers, the China is the largest consumption region across the world. According to research, the Asia Pacific is expected to maintain the highest growth rate throughout the forecast period.

On the basis of producing technology, the Polyolefins are producing methods can be categorized into conventional catalysts like Ziegler, Ziegler-Natta, or chrome on silica, and more recently developed metallocene or other single-site catalysts, and peroxide initiators in the case of LDPE. Currently, the conventional catalysts like Ziegler, Ziegler-Natta is leading the market.
