## Abstracts

Refrigeration oil is a high-temperature lubricant and is derived from either synthetic oil or mineral oil. It is a formulation of a mixture of oil and additives designed for its use in cooling systems. The purpose of this lubricant is to reduce the friction of metal parts and wear and tear on the compressor by lubricating the metal surfaces. The oil flows under high pressure to turn from liquid to vapor state to generate a cooling effect on account of its high chemical and thermal stability. Also, it exhibits high viscosity, low pour point, low contamination, and high dielectric strength. In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market. Refrigeration Oil Report by Material, Application, and Geography – Global Forecast to 2025 is a professional and comprehensive research report on the world's major regional market conditions, focusing on the main regions (North America, Europe and Asia-Pacific) and the main countries (United States, Germany, United Kingdom, Japan, South Korea and China).
