## Abstracts

RF Phase Shifters are used to change the transmission phase angle of an input signal. Ideally phase shifters provide an output signal with an equal amplitude to the input signal, any loss here will be accounted to the insertion loss of the component. The input signal is shifted in phase at the output based on the configuration of the phase shifter selected. In the context of China-US trade war and COVID-19 epidemic, it will have a big influence on this market. RF Phase Shifters Report by Material, Application, and Geography – Global Forecast to 2023 is a professional and comprehensive research report on the world's major regional market conditions, focusing on the main regions (North America, Europe and Asia-Pacific) and the main countries (United States, Germany, United Kingdom, Japan, South Korea and China).
