## Abstracts

Sandblasting is the operation of forcibly propelling a stream of abrasive material against a surface under high pressure to smooth a rough surface, roughen a smooth surface, shape a surface or remove surface contaminants.

Sandblasting Machine can have several reasons to be used, to quickly remove a layer, to create a matte effect, to remove oxidation or corrosion, to speed up the process of sanding an objects, to get into small places and crevices and to save on manual labor. Sandblasting has the benefit that the pallets used to blast the surface with are often re-usable for several times. Depending on the company, it can also be used for several different purposes: sanding a metal part, creating patterns on glass, turning normal glass into matte glass, removing paint from a surface etc. Since there are no liquids used, there is virtually no residue left behind on the surface except for dust. This will save on time cleaning the surface and prepping it for the next step.

In the context of China-US trade war and global economic volatility and uncertainty, it will have a big influence on this market.
