## Abstracts

Thermoplastic EPDM are a class of copolymers or a physical mix of polymers (usually a plastic and a rubber) which consist of materials with both thermoplastic and elastomeric properties. While most elastomers are thermosets, thermoplastics are in contrast relatively easy to use in manufacturing, for example, by injection molding. According to a brand new research, the global Thermoplastic EPDM market is expected to reach USD 1.8 billion by 2020.

In the basis of application, the automotive industry is the most prominent consumer of Thermoplastic EPDM, accounting for a share of over 35% in the overall consumption of Thermoplastic EPDM in the global market in 2015. The automotive industry has seen significant expansion in the past few years, especially across developing economies such as Asia Pacific and Latin America.

Base on type, there are six generic classes of commercial Thermoplastic EPDM: Styrenic block copolymers (TPE-s), Thermoplastic olefins (TPE-o), Elastomeric alloys (TPE-v or TPV), Thermoplastic polyurethanes (TPU), Thermoplastic copolyester, Thermoplastic polyamides.

Geographically, the Asia Pacific is the largest demand market, the Thermoplastic EPDM market in Asia Pacific is expected to expand at a favorable pace in the next few years, enabling the region to retain its dominance in the global market over the period between 2016 and 2020. The flourishing construction and electrical industries in the region will contribute to the favorable growth of Thermoplastic EDPM. Owing to the presence of a large number of electrical equipment parts manufacturers and a promising construction industry, China will emerge as the chief consumer of EPDM in the Asia Pacific market.

The global major vendors such as LANXESS, Mitsui Chemicals, Kumho Polychem, ExxonMobil among others.
