## Abstracts

Thyristor Device is a solid-state semiconductor device along with four layered alternating p-type and N materials. The function of thyristor not only can be used as a rectifier, but also can be used as contactless switch to realize the inversion of converting direct current into alternating current or converting alternating current of one frequency into alternating current of another frequency. In the context of China-US trade war and COVID-19 epidemic, it will have a big influence on this market.
