Abstracts

Ultrasound also known as diagnostic sonography, ultrasonography or sonogram is a kind of imaging technique/procedure that makes use of high-frequency sound waves for scanning and creating an image of body part (organs and structures inside the body). Compared to other imaging technologies like computed tomography (CT), MRI and others, ultrasound imaging provides real-time imaging of anatomical structures but cannot be used for functional imaging for a long time. Due to its less cost, best imaging quality, workflow efficiency, reliability, no requirement of same computing power, fast frame rates or specialized transducers now-a-days ultrasound scans are most popularly used diagnostic imaging technique.

Medical ultrasound is a diagnostic imaging technique based on the application of ultrasound. It is used to see internal body structures such as tendons, muscles, joints, vessels and internal organs.

Hospitals and Clinics are the main application of Ultrasound Medical Devices product and North American is the largest Ultrasound Medical Devices market on production and consumption.

Global Ultrasound Medical Devices market is projected to reach \$ 7.6 Billion by 2020, with a GAGR of 3.3% from 2016, and Asia will have a big dynamic momentum on the market growth. The major players in the global Ultrasound Medical Devices market are General Electric Company, Philips, Toshiba Corporation, Siemens AG, Hitachi Ltd., Samsung Electronics Co. Ltd., Mindray Medical International Ltd. etc.
