Abstracts

Viscosupplementation is a treatment that involves the injection of gel-like substances (hyaluronates) into a joint to supplement the viscous properties of synovial fluid. In a normal joint, synovial fluid (which naturally contains hyaluronic acid) helps to cushion the joint and provides lubrication to reduce friction which occurs with movement of the joint. In a joint affected by osteoarthritis, there is deterioration of cartilage, the tissue that covers the ends of the bones in a joint.

According to the statistics, the global viscosupplementation market was estimated to be valued at USD 1.87 billion in 2015, and is projected to reach USD 2.49 billion by 2020, registering a CAGR of 5.95% during the forecast period from 2016 to 2020. Factors driving the growth of viscosupplementation market are increasing geriatric population, increasing demand for minimally invasive surgical procedures, high patient awareness about new drugs and devices for the treatment of osteoarthritis and rising obese population globally.

On the basis of geographies, North America is the largest market of the global viscosupplementation market.
