Abstracts

3D printing is a machine-based process in which three-dimensional solid objects are made via a computer containing blueprints or digital files of the object. This is a revolutionary method that utilizes inkjet technology to save time and money by eliminating the need to design, print, and assemble different parts. 3D printing materials are used to manufacture solid objects. These materials are of different types such as plastics, metal, ceramics, and other materials. They are used by designers, engineers, architects, surgeons, and other professionals to make representative models for clients and students. As per Allied Market Research, the global demand for 3D printing materials was valued at \$578 million in 2015 and is expected to grow with a CAGR of 18.3% during the forecast period to reach \$1,871 million in 2022.

Currently, North America is the largest market for 3D printing materials in terms of demand, followed by Asia-Pacific and Europe. In Asia-Pacific, Japan is the largest market whereas in Europe, Germany holds the largest share. In the coming years Asia-Pacific is expected to grow rapidly due to developments in emerging countries such as China, India, Korea, and others. The 3D printing materials market is expected to register substantial growth in the near future due to rapidly growing industries such as aerospace and defense, healthcare, and automotive. Metal materials are expected to dominate the market in terms of growth rate during the forecast period. However, high cost associated with the techniques and materials is expected to restrict the market

growth.

The report segments the 3D printing materials by type, form, end-user industry, and geography. On the basis of type, it is divided into polymers, metals, ceramics, and others. According to form, it is diversified into powder, filament, and liquid. On account of end-user industry, the 3D printing material market is distributed into automotive, consumer products, healthcare, aerospace and defense, industrial, personal/prosumer, education and research, and others. Geographically, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA (Latin America, Middle East & Africa). Recent development in the 3D printing material market include release of Ultimaker CPE, Ultimaker PC, Ultimaker Nylon, and Ultimaker TPU 95A (3D printing materials) by Ultimaker, a Netherlands-headquartered company in September, 2016. Similarly, at the same time, Nexeo Solutions, a U.S. based company, launched Nexeo3D, a german language based ecommerce website to mark its entry into 3D printing material market.
