The global advanced glass market size valued at \$57.6 billion in 2019, and is projected to reach \$103.8 billion by 2027, growing at a CAGR of 7.6% from 2020 to 2027.

Advanced glasses are specialized grades of glass. They are designed with unique features, and provide various applications. These glasses are made of ash soda, natural gas, and silica. Depending on their uses, the advanced glasses undergo various processes, such as mechanical and chemical processes. Advanced glasses offer several benefits and applications including safety, UV protection, sound reduction, and security. They are used in various sectors, such as transportation, vehicles, and electronics. In addition, they are also used in laptop and cell phones as a screen protector. Moreover, it can be used as a windscreen, because it provides clear vision, particularly in bad weather conditions.

Growing urbanization is a major factor that fuels the development of the building & design industry, which further drives the growth of the advanced glass sector. In addition, rise in demand for value-added materials in housing fuels the market growth.

Furthermore, rise in number of energy-efficient towers and increase in use of mirrors and windscreens in the automotive sector are also expected to boost the demand for advanced glass during the forecast period. However, increased costs of raw materials are expected to hamper the market growth. Whereas, increase in use of advanced glasses in the industrial, automotive, and electrical sectors is anticipated to provide lucrative opportunities for the market expansion.
