Abstracts

In architecture, engineering, and construction (AEC), all three industries work together to operate various projects seamlessly and successfully. By integrating these separate entities architecture, engineering, and construction industries are working together more effectively and efficiently to achieve common goal. AEC software has various practical applications that facilitate outsourcing and exchange of information & technology within the industry. It helps to standardize these three different sectors and unite them by digital process to obtain better building information. This software has very interactive interface by which engineers can interact with architecture and construction supervisors very easily and obtain all technical information on a single window.

Numerous factors such as growth in infrastructure projects, owing to rapid urbanization and increase in productivity through exchange of information drive the market globally. Furthermore, mandatory rules and regulations applied by government authorities for the use of AEC software also drives the market globally. However, high initial cost of implementation of AEC software and lack of skilled workers in the industry restrain the market globally. Furthermore, growth in adoption of AR and VR in the construction industry and rise in implementation of IoT in numerous construction projects are expected to create lucrative opportunities in the global AEC market during the forecast period.

Architecture, engineering, and construction market is segmented into component, deployment mode, enterprise size, application, and region. By component, it is bifurcated into software and service. Depending on deployment mode, it is categorized into on-premise and cloud. On the basis of enterprise size, it is categorized into large enterprises and small & medium size enterprises. As per application, it is classified into construction & architecture companies, education, and others. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
