Abstracts

Global aerospace materials market was valued at \$3,950 million in 2018, and is expected to reach \$6,518.5 million by 2026, registering a CAGR of 6.5% from 2019 to 2026.

Aerospace materials are materials that offer high tensile strength, high temperature tolerance, great transparency, and hard surface. Aerospace material manufacturers are preferring the use of advanced plastics, fiber composites, and several metals & alloys in aircraft that offer desired properties, thus replacing conventional metals.

The growth of the global aerospace materials market is driven by increase in demand for lightweight and efficient aircraft. In addition, upsurge in spending power of consumers and rise in air passenger traffic in emerging countries have led to increase in fleet sizes, which significantly contributes toward the growth of the global market. Moreover, rise in fuel costs and accompanying incentives to make aircraft more efficient act as key driving factors of the market. Furthermore, modern materials such as PEEK, PMMA, and PPS have a greater ability to resist high-altitude UV radiations as compared to traditional materials, which boost their demand across the globe, thereby augmenting the market growth. However, complex designing is hampering the aerospace materials market growth. On the contrary, development of the commercial aviation sector in emerging economies is anticipated to offer remunerative opportunities for market expansion.

The global aerospace materials market is segmented into type, application, type of aircraft, and region. On the basis of type, the market is fragmented into composites, metals, and plastics. The composite segment is sub-segmented into resins and fiber. The fiber segment is further classified into glass fiber-based, carbon fiber-based, and aramid fiber-based. The resin segment is subdivided into epoxy, phenolic, polyester, thermoplastics, polyimides, and others. The metal segment is further categorized into steel, aluminum, and titanium. The plastics segment is divided into PEEK, PMMA, ABS, PC, PPS, and others. The applications covered in the study include interior and exterior. The interior segment is sub-segmented into passenger seating, galley, interior panels, and others. The exterior segment is further divided into propulsion systems, airframe, tail & fin, and windows & windshields. By type of aircraft, the market is segregated into commercial, military, rotorcraft, and space. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

The key players operating in the aerospace materials market industry include Mitsubishi Chemical Holdings Corporation, PPG Industries Inc., DuPont, Solvay, SABIC, Sumitomo Bakelite Co. Ltd., Toray Industries Inc., Röchling, Hexcel Corporation, and SGL Carbon.
