Air Insulated Switchgear Market

The air insulated switchgear market was valued at \$66.8 billion in 2023 and is projected to reach \$100.9 billion by 2033, growing at a CAGR of 4.2% from 2024 to 2033.

Air insulated switchgear (AIS) is a power redistribution device that aids in the redistribution of power from a primary distributor, using a high voltage transformer. Air is a major insulator in AIS as it helps to reduce electrical faults, thereby ensuring safe operation. The device comprises of disconnectors, circuit breakers, and busbars, all enclosed within a metal casing. The robust design and potential to handle large electrical loads make AIS a preferred choice for various applications in industrial plants, power distribution networks, and infrastructure projects.

Increase in demand for robust electrical distribution networks due to rapid surge in urbanization and industrialization globally is a key factor driving the growth of the air insulated switchgear market. In addition, rise in inclination toward sustainability is boosting the adoption of AIS as the device helps to reduce the consumption of energy by 40%. Currently, the development of modular & compact switchgears, assimilated with the capabilities of innovative technologies such as AI and the Internet of Things (IoT) is emerging as a significant trend. Furthermore, the integration of AIS

int%li%the power grid of renewable sources of energy; including wind, solar, and hydro; is acquiring traction. With increasing adoption of renewable energy sources, the management of their variable output has become pivotal t%li%ensure stable power supply.

However, AIS potentially causes severe environmental damage in case of leakage, due t%li%their usage of air as an insulating material. This limits the usage of switchgear, hence restraining market growth. Furthermore, the deployment of AIS faces significant challenges from gas-insulated switchgear (GIS), which prevents the widespread expansion of the air insulated switchgear market. According t%li%an article by Electric Energy Online, a platform offering daily news coverage of the energy industry, GIS has a lower footprint when compared t%li%AIS as the size of GIS substations is 10 times smaller than AIS.

Segment Review

The air insulated switchgear market is segmented int%li%voltage, application, and region. On the basis of voltage, the market is classified int%li%low, medium, and high. Depending on application, it is divided int%li%power distribution networks, industrial plants, infrastructure projects, data centers, renewable energy integration, and others. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

Key Findings

On the basis of voltage, the medium segment is expected t%li%maintain its lead position during the forecast period.

Depending on application, the power distribution networks segment is projected t%li%be the highest shareholder throughout the forecast period.

Region wise, Asia-Pacific is anticipated t%li%be the highest revenue generator by 2033.
