Abstracts

The airborne fire control radar market is driven by the rise in transition towards AESA-based systems, growth in security concerns due to territorial conflicts, and increase in military spending across the globe. Airborne fire control radar identifies the position (coordinates) of a target and provides data that is used to determine the target trajectory and its continuous position. Airborne fire control radar detects the target and estimates the target range, range-rate, azimuth angle, and elevation angle.

High advancements in recent years in radar technologies has resulted in more flexibility of the tools as well as the development of active electronically scanned array (AESA) in the airborne fire control radar systems. International events impact the growth of the market; therefore, the increasing possibility of future conflicts would require rapid deployment of equipment to the battlefield. Countries have started to invest heavily in the defense sector, which fuels the market growth. However, the rise in cyber warfare and incapability of radar in detecting stealth technologies may impede this growth.

The world airborne fire control radar market is segmented on the basis of its frequency band and geography. By frequency band, it is divided into S-band, X-band, and Ku/K/Ka-band. Further, by geography, it is categorized into North America (U.S. and Canada), Europe (UK, France, Germany, Russia, and rest of Europe), Asia-Pacific (India, China, Japan, South Korea, and rest of Asia-Pacific), and LAMEA (Saudi Arabia, Israel, and Brazil).

The key companies profiled in this report are Thales Group, BAE Systems, Lockheed Martin Corp., Northrop Grumman, and Raytheon Company.
