Abstracts

Lighting plays an important role in an aircraft to provide illumination for the pilot. Lighting system further improves the aesthetic appearance of both interior and exterior of the aircraft and correspondingly increases the conspicuity of the aircraft. In addition, exterior lighting system deployed in aircraft helps the pilot to get improved visibility of the surrounding, whereas interior lightings help to illuminate the interior of the aircraft, thus offering a greater visibility to the passengers onboard. Lighting comprises signaling devices as well as other display devices, thus helping the passengers in an efficient way to display various safety and security features in an aircraft. The aircraft lighting market has witnessed significant growth over the years, owing to increase in trend of advanced lightings to be installed in aircraft.

The growth of the global aircraft lighting market is driven by volumetric surge in the aviation sector and the introduction of new aircraft, which are equipped with latest technologies. Moreover, increase in the requirement for advanced aircraft globally has led to the development and production of better and efficient lighting system.

The global aircraft lighting market is segmented into interior light, exterior light, aircraft

application, light type, and region. Depending on interior light, the market is categorized into emergency lights, specialty lights, wash lights, reading lights, and lavatory lights. By exterior light, it is segregated into aircraft visibility lights, pilot lights, and specific purpose lights. According to aircraft type, it is differentiated into commercial, business jets, military, and helicopters. As per light type, it is bifurcated into fluorescent light and LEDs. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
