## Abstracts

The alpha-dextrin market was valued at \$68,000.00 thousand in 2023 and is estimated to reach \$102,156.70 thousand by 2034, exhibiting a CAGR of 3.8% from 2024 to 2034. A white, tasteless, and odorless polysaccharide produced through the enzymatic or acid hydrolysis of starch is referred to alpha-dextrin. It is made of glucose molecules, which are connected by alpha (α) glycosidic bonds. Alpha-dextrin is water-soluble carbohydrate, which is known for its low viscosity and high digestibility. This makes it useful as a binder, carrier, filler and stabilizer in different applications.

Expansion of food processing industries across developed and emerging economies drives the growth of the alpha-dextrin market. There is a shift in consumer preference for ingredients that enhance nutritional value and texture. Thus, manufacturers are focusing on this aspect and using alpha-dextrin. This increases its demand in the market.

However, lack of awareness about alpha-dextrin and its benefits limits the growth of the market. A lot of manufacturers are unaware about alpha-dextrin, and thus its not used as frequently as insulin or maltodextrin, despite its applications in different sectors. This limits its adoption and thus its growth in the market. Nevertheless, R&D and advancements in applications of alpha-dextrin in different sectors are expected to create lucrative opportunities for the growth of the alpha-dextrin market during the forecast period.
