The global animal protein market was valued at \$44,090.0 million in 2019, and is projected to reach \$58,500.3 million by 2027, registering a CAGR of 5.4%.

Animal protein is a protein ingredient that is derived from the sources such as egg, dairy, fish, and others. Animal protein consists of four types including egg protein, dairy protein, fish protein and gelatin. This animal protein is widely adopted in food & beverages industry, cosmetics & personal care industry, pharmaceuticals & nutraceuticals industry, and feed industry. Rising adoption of animal protein in industries like pharmaceuticals & nutraceuticals, feed industry and other has driven the growth of the animal protein market.

Wide application of animal protein such as dairy protein and egg protein, in the food & beverages industry drives the growth of the market. Moreover, increase in demand for proteins as nutritional and functional ingredient has driven the growth of the market. However, surge in demand for plant-based protein and stringent food regulations toward animal origin food additives is expected to restrict the market growth in terms of value sales during the forecast period. Nevertheless, introduction of protein supplements in untapped market and product innovation and rise in demand for organic protein ingredients is expected to bring new opportunities for the animal protein market during the forecast period in terms of value sales.

The global animal protein market segments are categorized into product type, form, application, and region. By product type, it is classified into egg protein, dairy protein, fish protein and gelatin. By form, the market is bifurcated into solid and liquid. By application, it is divided into food & beverages, pharmaceuticals & nutraceuticals, cosmetics & personal care and feed.
