## **Abstracts**

Fitness equipment comprise of all machines and monitoring devices required for numerous physical exercises. Fitness exercise's help in overall weight management and in improving physical stamina along with developing muscular strength. Moreover, physical exercises are also advised during certain medical treatments. The demand of fitness equipment is rising globally due to increasing health awareness. The commonly observed fitness equipment commercially are treadmills, stair climbers, weightlifting machines, stationary bicycles, etc.

The adoption of fitness equipment is majorly driven by the large number of obese people, especially in developed countries. The obese population segment, drives the usage of cardiovascular equipment for weight management. The increased awareness for health & fitness also drives the adoption of fitness equipment, especially favored by increasing gym memberships and in-home equipment sales. The growth in urban population is a key driving factor for the adoption of fitness equipment. Initiatives such as corporate wellness programs also contribute to the growth of the fitness equipment market. A large scale resale of used fitness equipment, limits the growth opportunities in this market. However, the rising demands from developing countries would ensure the overall market growth.
