## **Abstracts**

The Macrofiltration market for Asia-Pacific, Middle East and Africa was valued \$2.6 billion in 2018, and is projected to reach \$4.4 billion by 2026, at a CAGR of 6.7% from 2019 to 2026. Macrofiltration is the process of filtration of insoluble solid particles larger than 1.0 micron from water. These microns are passed through porous medium. There are different types of filters used for macrofiltration. These include bag filter, belt filter press, drum & disk, filter press, granular media filter, leaf belt, and tubular belt. Factors that are expected to fuel the growth of the Asia-Pacific, Middle East & Africa macrofiltration market are demand for macrofiltration across various end-users such as food & beverage, water & wastewater, chemical & pharmaceutical, and mining & metal.

In addition, increase in urbanization and industrialization in Asia-Pacific fuels the demand for portable water, to boost the water treatment process, which is projected to drive the macrofiltration market. However, high cost of auto backwash filters and high maintenance cost are hampering the growth of backwash filter. Furthermore, emerging trends such as increasing water treatment plants in Asia-Pacific, are estimated to provide lucrative opportunities for the growth of the macrofiltration market.

The Asia-Pacific, Middle East & Africa macrofiltration market is segmented by product, industry, and region. Based on product, the market is segmented into granular micro filter, filter press filter, leaf tubular and press filter, bag filter, belt filter press, auto backwash filters, and others. By industry, it is classified into water & wastewater, chemical & pharmaceutical, mining & metal, food & beverage, paper & pulp, and others. Based on region, it is analyzed across Asia-Pacific, the Middle East, and Africa.
