## **Abstracts**

Robotics technology includes the integration of electronics, artificial intelligence, computer science, mechatronics, bioengineering, and nanotechnology for design and development of robots. It is a technology dealing with application of computer-controlled robots for performing manipulative tasks. Robots are intelligent devices containing sensors, manipulators, control systems, power supply, and software to perform a task with increased efficiency. Robotics technology is increasingly being adopted in the Asia-Pacific region owing to rising demand for automation of processes, improved efficiency and productivity, and reduction in human errors. Various sectors including automotive, healthcare, defense, and aerospace have adopted robotics technology for process automation and efficient resource management. Industrial robots are majorly used in the Asia-Pacific region owing to the dominant automotive industry and low-cost manufacturing units. The rising aging population in this region also drives the demand of service robots in countries like China and Japan. Increased application of robots in diverse industries including entertainment, education, and healthcare further supplements the growth of this market. The factors restricting the growth of the market include high initial investment, and stringent safety regulations. Advancement in technologies including swarm robotics, cloud robotics, and bio-mimetics would provide numerous growth opportunities in the market.

Employment of robots enables enterprises to automate processes, manufacture high

quality products in large volumes, and increase production output, while reducing costs and wastage of resources. With increasing advancement in technologies, robots are used in wide applications including pharmacy, tele-surgery, physical therapy, manufacturing of electronic equipment, bomb diffusion, rescue operations, and assistance during natural disasters.

The major players operating in the Asia-Pacific Robotics technology market include ABB Group, Fanuc Corporation, Yamaha Corporation, and Yaskawa Electric Corporation. These players offer a diverse portfolio of robots to cater to the demands of organizations in the region. These vendors have developed affordable, compact, and energy efficient robots for application in small and medium businesses. These players have also acquired and collaborated with other players in the region for portfolio expansion and geographic penetration. For instance, in December 2014, FANUC Corporation introduced new robotics solutions including FANUC Robot R-2000iC series, and FANUC Robot M-900iB series to enhance its product portfolio of robotics solutions. These new solutions enabled the company to cater to a wider customer base and meet the increasing demands of the Asia-Pacific market.

The Asia-Pacific robotics technology market has been segmented based on type of robots, components, applications and country. On the basis of types of robots, the market is segmented into industrial robots, mobile robots and service robots. The component segment is divided into hardware, software and services. The application segment is further categorized into healthcare, defense and security, automotive, aerospace, electronics, and others (domestic, agriculture and education). The major vendors profiled in this report are Fanuc Corporation, ABB Group, Yamaha Corporation, Yaskawa Electric Corporation, Honda Motor Co. Ltd., Kawasaki Heavy Industries Ltd, and Seiko Epson Corporation.
