Abstracts

The Air Injection Reaction (AIR) and Exhaust Gas Recirculation (EGR) play an important part of the automotive exhaust and emission control system. The exhaust manifold acts a pathway for the exhaust gases from the engine's cylinder head exhaust ports and the exhaust pipes diverts the exhaust gases to the rear of the vehicle. Exhaust system that have one pipe are single exhaust systems and that have two pipes are dual exhaust systems. Engines such as V6 and V8 can have single or dual exhaust by installing a crossover pipe that is used to connect the exhaust from both the banks and channel it into one pipe.

The market is anticipated to witness a significant growth over the years, owing to the Increase in automobile production.

The global automotive exhaust system market is segmented based on technology, fuel type, vehicle type, and geography. Based on technology, the market is divided into Diesel Oxidation Catalyst (DOC), Diesel Particulate Filter (DPF), Selective catalytic reduction (SCR), Exhaust gas recirculation (EGR), Gasoline Particulate Filter (GPF), and others.
