Abstracts

Automotive software refers to the firmware and middleware operating system used for running in-vehicle embedded applications. Automotive software is generally a set of instructions that helps the user interact with underlying in-vehicle hardware and also perform control functions in a vehicle. Use of automotive software not only improved dashboard functions but also played an important role in improving safety systems, infotainment, control systems, and many other car features. Automotive software includes telematics, infotainment, powertrain, body control and comfort, communication, advanced driver assistance systems (ADAS) software.

The growth of the global automotive software market is driven by the increased adoption of ADAS features in vehicles, increasing adoption of connected car services, and intervention of innovative technologies for advanced UI are expected to drive the market growth. Based on these factors, numerous companies are introducing advanced vehicle software to ensure safety and security of vehicle and the passengers. Meanwhile, lack of standard protocols to develop software platforms, lack of connected infrastructure and troubleshooting & maintenance of automotive software is hampering

the growth of market during the forecast period. However, factors such as potential of 5G and AI, growing developments in semi-autonomous and autonomous vehicles and data monetization in extended automotive ecosystem, are expected to supplement the global automotive software market, thus providing a better opportunity for the growth of the market in the near future.
