## **Abstracts**

Autonomous last mile delivery consists of autonomous vehicles to deliver the product or service to customer's doorstep without actually involving any human intervention in the entire process. It ensures that the product is delivered to the customer within a stipulated time without hampering the dignity and market image of the company. Increased usage of internet along with expansion in the e-commerce industry increase the demand for products to be purchased online, which requires a better and efficient means to deliver the product to the customer. Thus, to fulfill the rising demand for the logistics business, various last mile delivery operated companies and product delivery services are being adopted by the companies such as the use of drones and ground delivery vehicles to deliver products in lesser time.

The top market players have carried out various developments in this field and offer the product delivery service that has been adopted by other companies and governments; thereby, boosting the market growth. For instance, Amazon has launched its product delivery robot called Scout, which is of the size of a small cooler and can roll along sidewalks and delivers packages to the doorstep of the customer.
