Abstracts

Autotransfusion is a process of blood transfusion where the blood of the patient is extracted from the site of wound, which then gets filtered and purified. This blood is then infused back to the patients' body. Autotransfusion is used in several surgeries such as cardiovascular surgery, orthopedic surgeries, surgeries related to trauma and during liver and other types of transplantation. The global autotransfusion devices and consumables market was valued at \$864 million in 2018, and is estimated to reach \$1,380 million by 2025, growing at a CAGR of 6.1% from 2019 to 2026.

The increase in the use of autotransfusion devices and consumables is due to its advantages over allogeneic techniques in preventing the risk of transfusion transmitted infection. In addition, the increase in the prevalence of cardiovascular diseases, trauma, transplantation and rise in technological advancements in blood transfusion techniques drive the autotransfusion devices and consumables market growth and is expected to follow the trend throughout the forecast period. Moreover, increase in government initiatives and focus on safe autotransfusion programs boosts the market growth. However, poor quality purification and improper mixing of blood components and a global shortage of autotransfusion can restrain the market growth. Furthermore, untapped market potential in developing regions is expected to provide lucrative opportunities for the market development.

This report segments the autotransfusions sales market based on product type, end use, and region to provide a detailed assessment of the market. Based on product type,

it is bifurcated into devices and consumables. The devices segment is further categorized into on-pump transfusion devices and off-pump transfusion devices. Based on end use, the market is categorized into hospitals, ambulatory surgical devices, and others. Based on region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

North America is the highest contributor for the growth of autotransfusion devices and consumables market, owing to better healthcare infrastructure and technological advancement in the region along with high disposable incomes and preference over allogenic transfusion techniques by the healthcare professionals and patient population alike. North America is expected to continue this trend during the forecast period. Asia-Pacific is the fastest growing region for the autotransfusion devices and consumables market and is anticipated to remain dominant throughout the forecast period.
