## **Abstracts**

The global BCG vaccine market is estimated to reach \$28,051 thousand by 2023, growing at a CAGR of 4.6% from 2017 to 2023, from \$20,366 thousand in 2016. Bacillus Calmette-Guérin (BCG) vaccine is the only vaccine available for prevention of human forms of tuberculosis (TB). This vaccine is generally administered to children at birth in countries with high incidence of TB. In regions with low level of TB, only children at high risk are typically immunized, whereas adults are generally not immunized. However, adults (up to the age of 35) who are frequently exposed to drug-resistant TB may also be given BCG vaccine.

The global BCG vaccine market is driven by increase in prevalence of tuberculosis and rise in technological advancements in vaccine research. Moreover, the increase in government initiatives and focus on immunization programs globally boost the market growth. However, side effects of BCG vaccine and a global shortage of BCG vaccine restrain this growth. Untapped market potential in developing regions is expected to present numerous opportunities for market development.

The global BCG vaccine market is segmented on the basis of demographics and country. Based on demographics, it is bifurcated into pediatrics (0-18 years), and adults (19-35 years). Based on country, it is analyzed across India, China, Bangladesh, Pakistan, Indonesia, Japan, Brazil, Mexico, South Africa, Kenya, Thailand, Argentina, Colombia, Chile, Singapore, and rest of the world.
