Abstracts

Bioimplant are medical devices or tissues that are surgically transplanted inside the body. These implants are used to replace or support any damaged body organs to enhance function of any body organ or to detect errors in normal body functioning. These can be either placed permanently or temporarily in human body and can be removed when they are no longer needed. Some of the implants are made up of bone, tissue, skin, ceramics, metals, plastics, and other materials.

The global bioimplant market was evaluated at \$77,738 million in 2016, and is estimated to reach \$124,154 million by 2023, with a CAGR of 6.9% during the forecast period. The growth in the bioimplant market is primarily attributed to the rise in prevalence of chronic diseases coupled with the rapidly aging population. Moreover, increased awareness and technological advancements in bioimplant further support the growth of the market. However, high implantation cost and lack of expertise are some of the factors that restrain the growth of the bioimplant market.

The global bioimplant market is segmented based on product type, material, and region. Based on product type, the market is categorized into cardiovascular implant, dental implant, orthopedic implant, spinal implant, ophthalmic implant, and others. By material type, it is divided into metallic biomaterial, ceramic biomaterial, polymer biomaterial, and natural biomaterials. Based on region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
