Abstracts

Biopharmaceuticals are drugs having a biological origin. These large and complex drugs, which often comprise heterogeneous mixtures, are produced using biotechnology and usually from genetically engineered cells. The global biopharmaceuticals market accounted for \$186,470 million in 2017, and is projected to reach \$526,008 million by 2025, registering a CAGR of 13.8% from 2018 to 2025. The global biopharmaceuticals market is driven by various factors, such as surge in prevalence of chronic diseases and rapid increase in the elderly population globally. Similarly, increase in strategic collaboration among the biopharmaceuticals companies is also expected to boost the market. However, high costs of drug development and a stringent regulatory scenario with respect to biopharmaceuticals are anticipated to impede the market growth. Conversely, increase in purchasing power of emerging economics is anticipated to provide lucrative opportunities to the market players throughout the forecast period.

The global biopharmaceuticals market is segmented based on type, application, and region. Based on type, the market is divided into monoclonal antibody, interferon, insulin, growth and coagulation factor, erythropoietin, vaccine, hormone, and others. By application, it is categorized into oncology, blood disorder, metabolic disease, infectious

disease, cardiovascular disease, neurological disease, immunology, and others. Region-wise, it is analyzed across North America, Europe, Asia-Pacific, and Latin America Middle East and Africa (LAMEA).
