Abstracts

Blockchain is a solution for majority of the industrial digital concerns such as, supply chain management, transaction speed, compliance management, product security and counterfeiting, transparency, and others. Blockchain as a technology initially was developed to serve as the public transaction ledger for cryptocurrencies, which uses distributed databases and cryptography to record and secure transactions. This characteristic of blockchain provides a high level of security while transmitting and storing data, open and transparent network infrastructure, decentralized ledger, and low cost of operations benefits. Moreover, blockchain in retail is anticipated to change the paper-intensive international trade processes to digital processes.

Factors such as increase in demand for transparent transactions and smart contracts is the key factor driving the market growth for the blockchain in retail industry. In addition, increase in investment by retail industries in blockchain-based solutions is also expected to boost the market growth. Moreover, rise in need to ensure quality, reliability, authenticity, and product safety are also some of the factors fueling the demand for blockchain solutions and services across global retailers. However, scarcity of skilled experts is expected to impede the market growth during the forecast period.

Furthermore, rapid changes in the retail industry due to technological advancements and international trade are expected to provide major growth opportunities for the blockchain retail market in upcoming years.
