Blood and Blood Components Market Expected to Garner \$18.6 Billion by 2033, Growing at a CAGR of 3.8%

Abstract: The global blood and blood components market is expected to grow primarily due to the rising global incidence of chronic diseases and advancements in blood processing & testing technologies. The North America region is predicted to witness profitable growth by 2033.

As per the report published by Research Dive, the global blood and blood components market was valued at \$12.9 billion in 2023 and is expected to register a revenue of \$18.6 billion by 2033 at a CAGR of 3.8% during the forecast period 2024-2033.

Dynamics of the Market

The increasing prevalence of accidents and surgical procedures, growing incidence of chronic diseases, and the rising demand for blood transfusions are expected to make the blood and blood components market a highly profitable one in the forecast period. Besides, the use of blood and blood components is expanding across various medical procedures, including organ transplants, cancer treatments, and aesthetic procedures,

thereby driving market growth.

However, according to market analysts, the high compliance cost, stringent regulations, and diverse regulatory frameworks across different regions might restrain the growth of the market.

Advancements in blood processing, storage, and testing technologies enhance the efficiency and safety of blood products, which is predicted to offer numerous growth opportunities for the market in the forecast period. Moreover, ongoing R&D efforts aimed at improving blood technologies present significant opportunities for blood and blood components market growth, enabling healthcare providers to meet increasing demand confidently.

Key Players of the Market

The major players of the blood and blood components market include Becton, Dickinson & Co., Bio-Rad Laboratories, Inc., Kidde-Fenwal Inc., Cerus Corporation, Beckman Coulter, Inc., Immucor, bioMérieux SA, Abbott, and Octapharma AG.
